11. Toxicological information

Information on likely routes of exposure

Product Information	The IARC Monograph (Vol 93, 2010, Carbon Black, Titanium Dioxide, Talc) states: Operators in user industries who handle fluffy or pelleted Carbon Black during rubber, paint and ink production are expected to have significantly lower exposures to Carbon Black than workers in Carbon Black production. Other workers in user industries who handle it occasionally have little opportunity for exposure. And further... "End-users of these products (rubber, ink or paint) are unlikely to be exposed to airborne Carbon Black particles, which are bound within the product matrix." Based upon the screening level assessment using testing data submitted by NPCA on the amounts of respirable silica produced from the normal use of interior flat latex paints, OEHHA has decided to issue a safe use determination to NPCA for crystalline silica (quartz) in interior latex paints. The same method of encapsulation, as used for latex paints, is used for this product. Therefore, the crystalline silica (quartz) that is used in this product is not considered hazardous.
Inhalation	Specific test data for the substance or mixture is not available.
Eye contact	Specific test data for the substance or mixture is not available.
